## FORWARD DEPLOYED SOFTWARE ENGINEER SUMMARY

- Forward deployed software engineer bridging AI systems, data infrastructure, and enterprise deployments
- 13+ years at Google, Palantir, and Postman building production software and data systems at scale
- Taking ambiguous problems from concept to production, shipping decision systems, AI agents, proven integrations

## INDUSTRY EXPERIENCE

### Postman – Forward Deployed Engineering

Senior Forward Deployed Software Engineer: October 2025 – Present

- Shipped **Postman's customer milestones agent** from zero to production, evaluating customer-specific derived requirements against implementation progress using Gong, Salesforce, and product-usage data, automated reporting and Slack interaction and evolved the system into a shared data foundation for other internal AI agents.
- Built a **prospect-scoring pipeline** across 10 calibrated solution areas, using domain-specific LLM evidence evaluation to synthesize customer data, published leaderboards and detailed sales briefs used in real conversions,
- Created the **Notion Customer Index**, the authoritative customer database for Field Engineering, continuously enriched with hundreds of engagements synchronized Salesforce in a single cross-team view for leadership.
- Delivered enterprise solutions including a CI/CD reference pattern, Postman Terraform Provider enabling permission management at tens-of-thousands-user scale, and an agent validating API fidelity during migrations.

### Palantir Technologies – BD Commercial

Forward Deployed Software Engineer: July 2015 – April 2025

- **Tech lead** of several ~6-engineer teams creating big data processing, analysis, and operational decision-making solutions for clients across 9 industries, including leveraging **Generative AI**
- Developed real-time optimization system tracking **4,000+ daily flights across 200+ airports**, integrating with live air traffic & scheduling data using **Kinesis, Kafka, Flink, Spark**
- Created entity resolution pipeline ingesting **1 TB/day across 60+ data sources** reconciling **millions** of customer and transaction records for compliance teams across multiple countries
- **Led design and implementation** of a regulation-compliant member engagement platform for a major US healthcare payer, streamlining outreach to millions of members, awarded [patent](#)
- Built real-time fault tracking system ingesting high-frequency telemetry **from 100+ industrial machines** deployed at 20+ customers, reducing downtime by enabling anomaly detection in seconds

### Google – Helpouts, Hangouts

Software Engineer: July 2013 – July 2015

- Delivered scalable front-end features in **Java, JS**, including secure messaging and consent workflows
- Implemented **unified notification system** across iOS, Android, SMS, web, and email, reducing duplication and improving developer velocity while ensuring a consistent user experience

## EDUCATION

University of Washington, Seattle, WA

M.S. Computer Science and Engineering, June 2013

- Research Assistant: October 2010 – June 2013 under Professor Michael Ernst
- **NET Binary Instrumentation for Invariant Detection** - Published "[Case Studies and Tools for Contract Specifications](#)" *ICSE 2014*, Created program to modify **C#** allowing reflective variable inspection for automated invariant detection and contract generation

B.S. Computer Engineering, June 2012, Cum Laude, B.A. Political Science, June 2012, Cum Laude

## TECHNICAL SKILLS

- Languages: Java, Python, C#, JS, TypeScript, SQL, Ruby
- Big Data & Streaming: Apache Spark, Apache Flink, Apache Kafka, Hadoop, Elasticsearch
- Cloud & Infrastructure: AWS (EC2, S3, Redshift, Kinesis), OAuth 2.0, PostgreSQL
