FORWARD DEPLOYED SOFTWARE ENGINEER SUMMARY

- Forward deployed engineer bridging data infrastructure, enterprise deployment, and AI-powered decision systems
- 10+ years at Google, Palantir, and Postman building and shipping real-time pipelines at massive scale
- Now shipping agentic workflows, RAG pipelines, and LLM-powered tools directly in client environments

INDUSTRY EXPERIENCE

Postman – Forward Deployed Engineering

Senior Forward Deployed Software Engineer: October 2025 – Present

- Led architecture for enterprise-scale deployment and lifecycle management of Postman for at large customers
- Created **reference architecture** for integrating Postman with a Git repo, including CI pipelines, auto promotion
- Built Postman's **multi-cloud API Gateway integration** that ingests API definitions and analyzes production traffic to infer request and response patterns, generating realistic mock servers for developer testing
- Built **AI agent** (Astro + Mastra) correlating product usage (Redshift), contractual requirements (Salesforce API), and call transcripts (Gong), using Pinecone vector search to identify gaps and surface insights interactively via Slack

Palantir Technologies – BD Commercial

Forward Deployed Software Engineer: July 2015 – April 2025

- **Tech lead** of several ~6-engineer teams creating big data processing, analysis, and operational decision-making solutions for clients across 9 industries, including leveraging **Generative AI**
- Developed real-time optimization system tracking **4,000+ daily flights across 200+ airports**, integrating with live air traffic & scheduling data using **Kinesis, Kafka, Flink, Spark**
- Created entity resolution pipeline ingesting **1 TB/day across 60+ data sources** reconciling **millions** of customer and transaction records for compliance teams across multiple countries
- **Led design and implementation** of a regulation-compliant member engagement platform for a major US healthcare payer, streamlining outreach to millions of members, awarded [patent](#)
- Built real-time fault tracking system ingesting high-frequency telemetry **from 100+ industrial machines** deployed at 20+ customers, reducing downtime by enabling anomaly detection in seconds
- Built OAuth 2.0 client libraries for Foundry API auth and data-powered email service, deployed to 12+ customers

Google – Helpouts, Hangouts

Software Engineer: July 2013 – July 2015

- Delivered scalable front-end features in **Java, JS**, including secure messaging and consent workflows
- Implemented **unified notification system** across iOS, Android, SMS, web, and email, reducing duplication and improving developer velocity while ensuring a consistent user experience

EDUCATION

University of Washington, Seattle, WA

M.S. Computer Science and Engineering, June 2013

B.S. Computer Engineering, June 2012, Cum Laude, B.A. Political Science, June 2012, Cum Laude

ACADEMIC RESEARCH

.NET Binary Instrumentation for Invariant Detection – under Professor Michael Ernst

Research Assistant: October 2010 – June 2013

- Published "[Case Studies and Tools for Contract Specifications](#)" *ICSE 2014*, Created program to modify **C#** allowing reflective variable inspection for automated invariant detection and contract generation

TECHNICAL SKILLS

- Languages: Java, Python, C#, JS, TypeScript, SQL, Ruby
- Big Data & Streaming: Apache Spark, Apache Flink, Apache Kafka, Hadoop, Elasticsearch
- Cloud & Infrastructure: AWS (EC2, S3, Redshift, Kinesis), OAuth 2.0, PostgreSQL
